Experience a learning environment designed for problem-solving with technology

HOW ESCAPE THE BUS WORKS

WHY ESCAPE THE BUS

Technology can find & filter information faster than humans, making information a commodity. Hence, we must develop human intelligence - measured by our ability to use available information to solve real problems. We think escape rooms have mastered this concept, so we built one on wheels to role model the problem solving pedagogy we believe is essential for the future of education.

Role Model educating to ISTE Standards
Through station-based learning, participants are empowered to leverage the 4C’s and experience micro-leadership with different challenges designed for different skillsets.

Showcase strategies & resources to engage students
Participants will interact with a variety of technologies, including AR, 3-D Printing, coding, and software applications that can be implemented into daily learning strategies.

Build comradery across departments and teams
Break down social barriers with interconnected challenges that require effective communication and collaboration in a time-pressured environment, creating an unforgettable shared experience for all involved.
**WHO ESCAPE THE BUS IS FOR**

**STUDENTS**
For 4th-12th grade, it’s the perfect on-site field trip

**EDUCATORS**
Ideal for site-level PD, especially to kick-start new semesters

**ADMINISTRATORS**
Always a crowd-favorite session at district-wide conferences and PD

**IDEALLY, ALL 3 TOGETHER**
We love to see students, educators, and administrators collaborating to solve problems because that’s what we believe education should look like on a regular basis.

---

**WHAT PAST ESCAPEES HAVE SAID**

It exercised my understanding of how to be effective at integrating different standards, with different content and modalities that reside with different learners. The experience entailed **100% engagement and allowed for application of different skills** to occur.

Escape the Bus is an amazing opportunity for both **students and educators to work together** on team building skills in a fun, challenging, creative environment!

Many of the students said it was **the best day they ever had at school**. One 5th grade boy with an IEP who barely reads at a 1st-grade level due to a severe speech impediment and extreme ADHD became an active participant in solving the puzzles with his teammates. He was walking on air the next day, telling everyone about his participation on the bus.
